## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 2, 3, and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation "the upper joist" and "the building structure" in the first and last lines of the claim. There is insufficient antecedent basis for this limitation in the claim.

Art Unit: 3635

Claim 3 recites the limitation "the basic vertical and horizontal elements of a frame" and "the entire structure" in the first and second lines of the claim. There is insufficient antecedent basis for this limitation in the claim.

Claim 4 recites the limitation "the various elements" in the first line of the claim. There is insufficient antecedent basis for this limitation in the claim.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

### ***Specification***

4. The detailed description of the invention is objected to because reference character "12" has been used to designate both the foundation and the floor joist.

### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3635

6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,134,859 to Rudd.

Regarding claim 1, Rudd discloses a composite stud (see fig. 1)

Claims 2, 3, and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,937,591 to Markey.

Regarding claims 2, Markey teaches a building construction, which requires a means of indexing the height of the upper joist to obtain a leveling of the upper joist to provide a uniform plane. The top edge of the wall panels provides a means for indexing the height of the upper joist to provide a level uniform plane (see fig 10 and fig 12).

Regarding claim 3, Markey teaches means of integrating the basic vertical and horizontal elements of a frame construction, which gives rigidity to the entire structure. Fig. 11 shows the basic horizontal and vertical elements of the frame constructed in a manner to give rigidity to the entire structure.

Regarding claim 4, Markey teaches means of construction and joining the various elements without the need for complex cutting or continued measurement (see figs. 1-12). Markey shows basic horizontal and vertical members with straight edges that do not require the need for complex cutting.
